

# PC814XJ0000F Series

## **DIP** 4pin **AC Input Photocoupler**

\*4-channel package type is also available. (model No. PC844XJ0000F Series)

## Description

PC814XJ0000F Series contains an IRED optically coupled to a phototransistor.

It is packaged in a 4pin DIP, available in SMT gullwing lead-form option.

Input-output isolation voltage(rms) is 5.0kV.

Collector-emitter voltage is 80V and CTR is 20% to 300% at input current of ±1mA.

#### Features

- 1. 4pin DIP package
- 2. Double transfer mold package (Ideal for Flow Soldering)
- 3. AC input type
- 4. High collector-emitter voltage (V<sub>CEO</sub> : 80V)
- 5. Current transfer ratio (CTR : MIN. 20% at I<sub>F</sub>=±1mA,  $V_{CE}=5V$
- 6. High isolation voltage between input and output (V<sub>iso(rms)</sub> : 5.0 kV)
- 7. Lead-free and RoHS directive compliant

#### Agency approvals/Compliance

- 1. Recognized by UL1577, file No. E64380 (as model No. PC814)
- 2. Approved by VDE, DIN EN60747-5-2<sup>(\*)</sup> (as an option), file No. 40008087 (as model No. PC814)
- 3. Package resin : UL flammability grade (94V-0)

(\*) DIN EN60747-5-2 : successor standard of DIN VDE0884

#### Applications

- 1. Programmable controllers
- 2. Telephone sets, telephone exchangers
- 3. System appliances
- 4. Signal transmission between circuits of different potentials and impedances

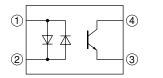

Notice The content of data sheet is subject to change without prior notice

In the absence of confirmation by device specification sheets, SHARP takes no responsibility for any defects that may occur in equipment using any SHARP devices shown in catalogs, data books, etc. Contact SHARP in order to obtain the latest device specification sheets before using any SHARP device.

#### Design Considerations

#### Design guide

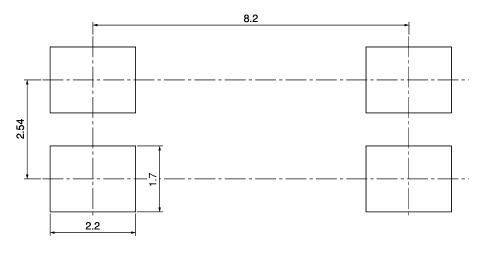

While operating at  $I_{F}$ <1.0mA, CTR variation may increase. Please make design considering this fact.

This product is not designed against irradiation and incorporates non-coherent IRED.

#### Degradation

In general, the emission of the IRED used in photocouplers will degrade over time. In the case of long term operation, please take the general IRED degradation (50% degradation over 5 years) into the design consideration.

#### • Recommended Foot Print (reference)

☆ For additional design assistance, please review our corresponding Optoelectronic Application Notes.

(Unit : mm)

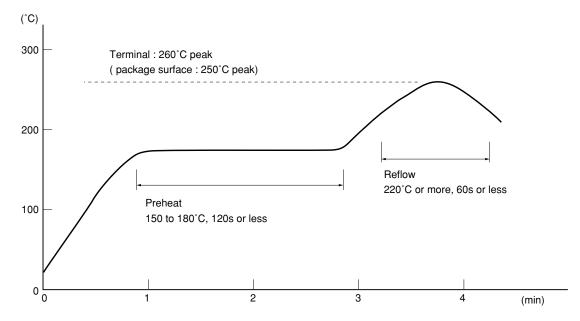

#### Manufacturing Guidelines

#### Soldering Method

**Reflow Soldering:** 

Reflow soldering should follow the temperature profile shown below. Soldering should not exceed the curve of temperature profile and time. Please don't solder more than twice.

#### Flow Soldering :

Due to SHARP's double transfer mold construction submersion in flow solder bath is allowed under the below listed guidelines.

Flow soldering should be completed below 270°C and within 10s. Preheating is within the bounds of 100 to 150°C and 30 to 80s. Please don't solder more than twice.

#### Hand soldering

Hand soldering should be completed within 3s when the point of solder iron is below 400°C. Please don't solder more than twice.

#### Other notices

Please test the soldering method in actual condition and make sure the soldering works fine, since the impact on the junction between the device and PCB varies depending on the tooling and soldering conditions.

#### • Cleaning instructions

Solvent cleaning:

Solvent temperature should be 45°C or below Immersion time should be 3 minutes or less

#### Ultrasonic cleaning:

The impact on the device varies depending on the size of the cleaning bath, ultrasonic output, cleaning time, size of PCB and mounting method of the device.

Therefore, please make sure the device withstands the ultrasonic cleaning in actual conditions in advance of mass production.

#### Recommended solvent materials:

Ethyl alcohol, Methyl alcohol and Isopropyl alcohol

In case the other type of solvent materials are intended to be used, please make sure they work fine in actual using conditions since some materials may erode the packaging resin.

#### Presence of ODC

This product shall not contain the following materials. And they are not used in the production process for this product. Regulation substances : CFCs, Halon, Carbon tetrachloride, 1.1.1-Trichloroethane (Methylchloroform)

Specific brominated flame retardants such as the PBBOs and PBBs are not used in this product at all.

This product shall not contain the following materials banned in the RoHS Directive (2002/95/EC).
•Lead, Mercury, Cadmium, Hexavalent chromium, Polybrominated biphenyls (PBB), Polybrominated diphenyl ethers (PBDE).

#### Package specification

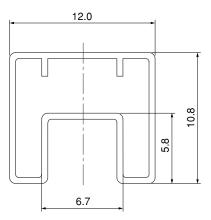

#### • Sleeve package

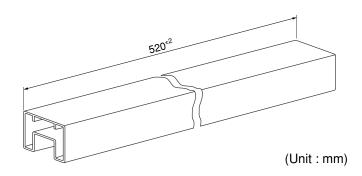

Package materials Sleeve : HIPS (with anti-static material) Stopper : Styrene-Elastomer

#### Package method

MAX. 100pcs of products shall be packaged in a sleeve. Both ends shall be closed by tabbed and tabless stoppers. The product shall be arranged in the sleeve with its primary side mark on the tabless stopper side. MAX. 20 sleeves in one case.

#### Sleeve outline dimensions

## SHARP

#### Important Notices

• The circuit application examples in this publication are provided to explain representative applications of SHARP devices and are not intended to guarantee any circuit design or license any intellectual property rights. SHARP takes no responsibility for any problems related to any intellectual property right of a third party resulting from the use of SHARP's devices.

• Contact SHARP in order to obtain the latest device specification sheets before using any SHARP device. SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structure, and other contents described herein at any time without notice in order to improve design or reliability. Manufacturing locations are also subject to change without notice.

• Observe the following points when using any devices in this publication. SHARP takes no responsibility for damage caused by improper use of the devices which does not meet the conditions and absolute maximum ratings to be used specified in the relevant specification sheet nor meet the following conditions:

(i) The devices in this publication are designed for use in general electronic equipment designs such as:

- --- Personal computers
- --- Office automation equipment
- --- Telecommunication equipment [terminal]
- --- Test and measurement equipment
- --- Industrial control
- --- Audio visual equipment
- --- Consumer electronics

(ii) Measures such as fail-safe function and redundant design should be taken to ensure reliability and safety when SHARP devices are used for or in connection with equipment that requires higher reliability such as:

- --- Transportation control and safety equipment (i.e., aircraft, trains, automobiles, etc.)
- --- Traffic signals
- --- Gas leakage sensor breakers
- --- Alarm equipment
- --- Various safety devices, etc.

(iii) SHARP devices shall not be used for or in connection with equipment that requires an extremely high level of reliability and safety such as:

- --- Space applications
- --- Telecommunication equipment [trunk lines]
- --- Nuclear power control equipment
- --- Medical and other life support equipment (e.g., scuba).

• If the SHARP devices listed in this publication fall within the scope of strategic products described in the Foreign Exchange and Foreign Trade Law of Japan, it is necessary to obtain approval to export such SHARP devices.

• This publication is the proprietary product of SHARP and is copyrighted, with all rights reserved. Under the copyright laws, no part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP. Express written permission is also required before any use of this publication may be made by a third party.

 $\cdot$  Contact and consult with a SHARP representative if there are any questions about the contents of this publication.
