

Coil On Plug (COP) and Signal Probe

The SA204 COP and signal probe is a perfect design to check coil-on-plug ignition coils and spark plugs.

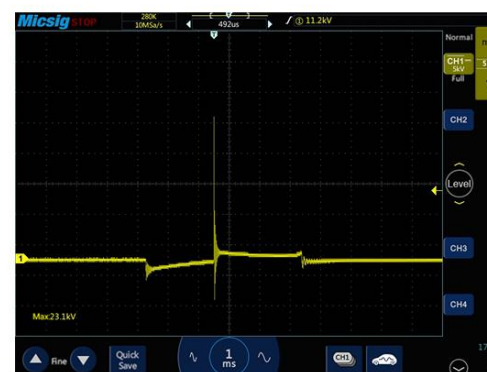

Flexible design

- Attenuation is 1:5000
- Connected directly to the spark plugs
- BNC port to suitable oscilloscope
- Find misfires fast for automotive diagnostic
- Displays scope patterns of the secondary, faster than scoping the primary
- Works on all automotive scopes capable of displaying ignition patterns
- Can also be used to investigate injectors and other inductive actuators
- Flexible design allows for easier access to hard-to-reach components

APPLICATION

Reference waveform (negative ignition) shown as below figure:

PRODUCT ACCESSORIES

	Ignition Probe (standard)	1 PC
	Special Carry bag (standard)	1 PC
	Double Ended BNC Connector (optional)	1 PC
	Extended Cable (1.5m) (optional)	1 PC
