## 1 Description

### 1.1 Introduction

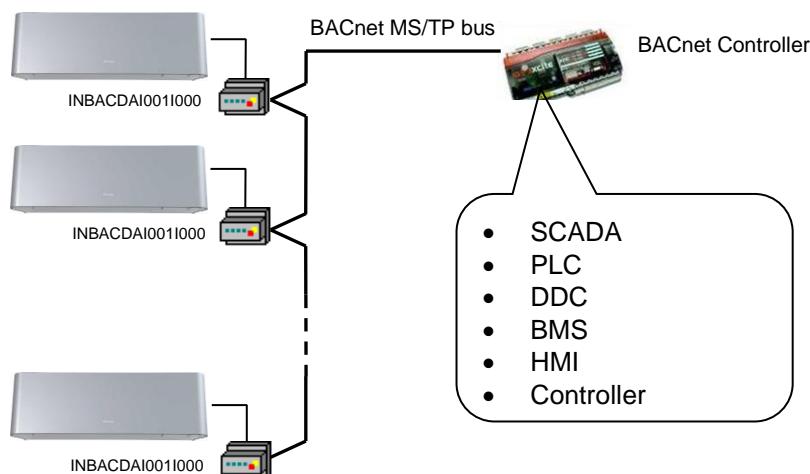

This document describes the integration of Daikin air conditioning systems into BACnet compatible devices and systems using gateway *INBACDAI001I000*.

The aim of this integration is to monitor and control your Daikin air conditioning system, remotely, from your Control Center using any commercial SCADA or monitoring software that includes a BACnet driver or connect it to other BACnet devices to do any automation. To do it so, Intesis allows BACnet communication allowing polling or subscription requests (COV).

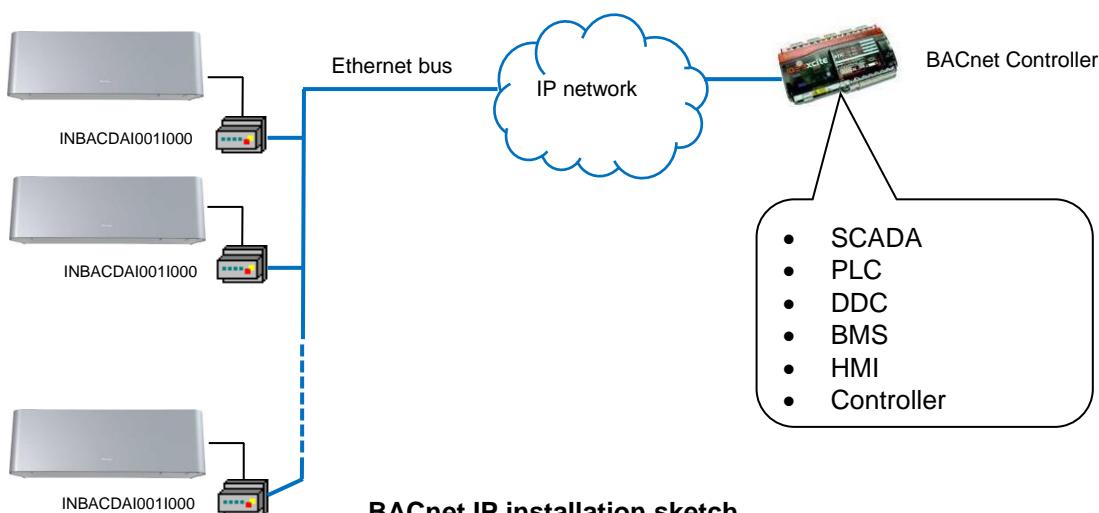

Intesis makes available the Daikin air conditioning system indoor units through independent BACnet objects.

Abstraction of Daikin air conditioning system properties and functionalities as fixed BACnet Objects. Intesis allows fixed BACnet object IDs mapping. Simple configuration is needed: just select the appropriate communication parameters (MAC address, baud rate...).

This document assumes that the user is familiar with BACnet and Daikin technologies and their technical terms.

**BACnet MS/TP installation sketch**

**BACnet IP installation sketch**

## 1.2 *Functionality*

Intesis continuously read the Daikin AC unit and keeps the updated status of all objects in its memory, ready to be served when requested from the BACnet side.

The role of Intesis consists in associate the elements of the Daikin AC unit with BACnet objects.

The control of the indoor units through the INBACDAI001I000 is permitted, so commands toward the Daikin AC unit are permitted too.

The indoor unit is offered in a set of BACnet objects and extra functionality.

## 1.3 *Capacity of Intesis*

Intesis is capable of integrating one single Daikin AC unit and its associated elements.

| Element                | Max. | Notes  |
|------------------------|------|--|
| Number of indoor units | 1    | Number of indoor units that can be controlled through Intesis  |
| Number of Objects      | 20   | Number of Daikin AC signals available as objects into Intesis. |

## 1.4 *Quick Setup*

1. Install Intesis in the desired installation site (DIN rail mounting inside a metallic industrial cabinet connected to ground is recommended).
2. Connect the communication cables. Details in section 6.
3. Connect to the Intesis. Details in section 7.5.
4. (Optional) Configure the Intesis using the configuration tool. Details in section 7.5.2.
5. Check the BACnet objects list for its integration to your BACnet project. Details in section 5.2.
6. Check if there is communication between BACnet and AC system. Details in section 7.5.3.
7. The Intesis is ready to be used in your system.

## 2 Protocol Implementation Conformance Statement

### BACnet Protocol Implementation Conformance Statement (PICS)

Date: 2015-04-01

Vendor Name: HMS Industrial Networks S.L.U

Product Name: INBACDAI001I000

Product Model Number: INBACDAI001I000

Application Software Version: 1.0

Firmware Revision: 1.0.0.0

BACnet Protocol Revision: 12

#### Product Description:

*Daikin air conditioning system – BACnet MS/TP & BACnet IP Gateway*

Abstraction of Daikin air conditioning system properties and functionalities as BACnet Objects.

#### 2.1 BACnet Standardized Device Profile (Annex L):

- BACnet Operator Workstation (B-OWS)
- BACnet Building Controller (B-BC)
- BACnet Advanced Application Controller (B-AAC)
- BACnet Application Specific Controller (B-ASC)
- BACnet Smart Sensor (B-SS)
- BACnet Smart Actuator (B-SA)

Additional BACnet Interoperability Building Blocks Supported (Annex K):  
Reference of BIBBs List

#### 2.2 Segmentation Capability:

Segmented request supported  No  Yes Window Size 16 .  
Segmented responses supported  No  Yes Window Size 16 .

#### 2.3 Data Link Layer Options:

- BACnet IP, (Annex J)
- BACnet IP, (Annex J), Foreign Device
- ISO 8802-3, Ethernet (Clause 7)
- ANSI/ATA 878.1, 2.5 Mb. ARCNET (Clause 8)
- ANSI/ATA 878.1, RS-485 ARCNET (Clause 8), baud rate(s) \_\_\_\_\_
- MS/TP master (Clause 9), baud rate(s): 9600, 19200, 38400, 76800
- MS/TP slave (Clause 9), baud rate(s):
- Point-To-Point, EIA 232 (Clause 10), baud rate(s):
- Point-To-Point, modem, (Clause 10), baud rate(s):
- LonTalk, (Clause 11), medium: \_\_\_\_\_
- Other: \_\_\_\_\_

## 2.4 Device Address Binding:

Is static device binding supported? (This is currently necessary for two-way communication with MS/TP slaves and certain other devices.)  Yes  No

## 2.5 Networking Options:

- Router, Clause 6 - List all routing configurations, e.g., ARCNET-Ethernet, Ethernet-MS/TP, etc.
- Annex H, BACnet Tunneling Router over IP
- BACnet/IP Broadcast Management Device (BBMD)  
Does the BBMD support registrations by Foreign Devices?  Yes  No

## 2.6 Character Sets Supported

Indicating support for multiple character sets does not imply that they can all be supported simultaneously.

- ANSI X3.4
- IBM™/Microsoft™ DBCS
- JIS C 6226
- ISO 10646 (UCS-4)
- ISO 10646 (UCS-2)
- ISO 8859-1

## 2.7 Gateway

If this product is a communication gateway, describe the types of non-BACnet equipment/network(s) that the gateway supports:

**Daikin Air Conditioning Units compatible with Domestic line air conditioners.**

### 3 BACnet Interoperability Building Blocks Supported (BIBBs)

#### 3.1 Data Sharing BIBBs

## 5.3 Objects and properties

Below you can find relevant information for the objects and properties.

**Object\_Identifier:** In the **Device Object**, is configurable writing directly on the property. either from BACnet or through our configuration tools and can be set automatically or manually. When set automatically, it is set using a base address and the address selected in SW2 P1..P7. The base address can be selected using the configuration tool. When set manually, the address is directly the one configured on the configuration tool. See section 7.4 for more information

**Object\_Name:** In the **Device Object**, is configurable writing directly on this property. This can be done using the configuration tools too. See section 7.4 for more information.

**Description:** In the **Device Object**, is configurable writing directly on the property, length maximum 63 chars. This string is configurable using the configuration tool. See section 7.4 for more information.

## 6 Connections and switches

### 6.1 Connect to the AC indoor unit interface

The interface comes with a cable (1,9 meters long) for direct connection to the internal control board of the AC indoor unit.

Disconnect mains power from the AC unit. Open the front cover of the indoor unit in order to have access to the internal control board. In the control board locate the socket connector marked as **S21**.

Using the cable that comes with the interface, insert one of its connectors, the one installed in the shortest uncovered part, into the socket of the INBACDAI001I000 marked as **AC Unit**, and the other connector, the one in the largest uncovered part, into the socket **S21** of the AC unit's control board. Fix the INBACDAI001I000 outside the AC indoor; remember that INBACDAI001I000 must be also connected to the BACnet network. Close the AC indoor unit's front cover again.

**⚠ Important:** Do not modify the length of the cable supplied with the interface, it may affect to the correct operation of the interface

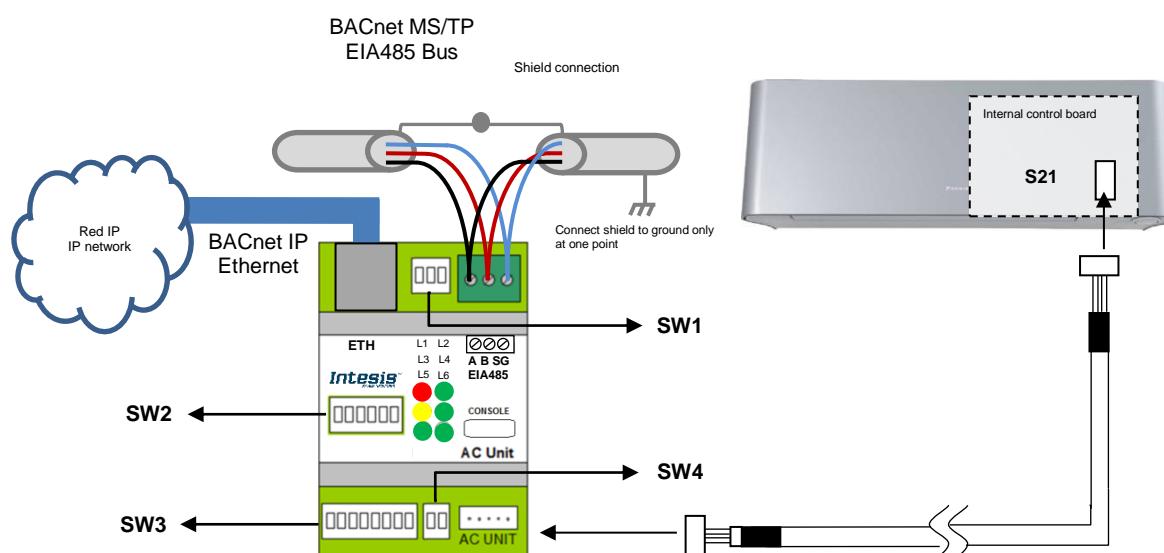

Figure 2.2 Connection diagram

Please, check the configuration for the AC unit to ensure proper control of the AC unit according to its specifications. Use **SW4** and **SW3** for that purpose.

#### SW3 - Celsius/Fahrenheit selection

| Binary value<br>b <sub>5</sub> ...b <sub>4</sub> | Decimal value | Switches<br>1 2 3 4 5 6 7 8 | Description                     |

| x1   | 1             | x ↑             | Horizontal vanes available     |

**⚠ Important:** Remember that switch changes only apply after an Intesis power cycle

## 6.2 Connect to BACnet MS/TP

Connect the EIA485 bus wires to the plug-in terminal block (EIA485) of INBACDAI001I000; respect the polarity on this connection (A+ and B-).

Connect the ground signal to the plug-in terminal block (SG).

Respect the maximum distance of 1.200 meters for the bus, no loop or star topologies are allowed for EIA485 bus.

Remember that a terminator resistor of  $120\ \Omega$  must be present at each end of the bus to avoid signal reflections and also a polarization mechanism. Please, use switch **SW1** in order to configure these parameters.

Please, check as well configuration on **SW2** and **SW3** before connecting to BACnet MS/TP.

### 6.2.1 MS/TP MAC address switch configuration

**⚠ Important:** Remember that switch changes only apply after an Intesis power cycle

\* Note: If Autobaudrate is selected, the INBACDAI001I000 will look for another BACnet MS/TP device with a fixed baudrate in order to match this value. Once detected, the baudrate will not be modified until a device reset is produced.

## 6.3 Connect to BACnet IP

Connect the RJ45 connector to the Ethernet connection (ETH) of INBACDAI001I000.

Respect same recommendations as per any other Ethernet communication network.

Remember to activate the IP interface through the **SW3** switch.

| Binary value<br>b <sub>5</sub> ...b <sub>4</sub> | Decimal value | Switches<br>1 2 3 4 5 6 7 8 | Description                         |

By default, the INBACDAI001I000 comes with a static IP address: **192.168.100.246**.

In order to change it, please use the configuration tool and select either DHCP or another static IP (recommended) that suits your integration project requirements. Check section 7.4 for more information.

### 6.3.1 BACnet Device Instance

If the “Auto Device Instance” is used, keep in mind that the Device Instance will be build using the “Device Instance Base” + the address selected in SWP2 P1-P7.

**⚠️ Important:** Remember that switch changes only apply after an Intesis power cycle

## 7 Set-up process and troubleshooting

### 7.1 Pre-requisites

In a BACnet MS/TP integration, it is necessary to have the BACnet MS/TP Master device operative and well connected to the BACnet MS/TP port of the INBACDAI001I000.

In a BACnet IP integration, it is necessary to have the BACnet IP client operative and well connected to the IP network and the INBACDAI001I000 connected to this same IP network through the ETH port.

Items supplied by HMS Networks for this integration are:

- Intesis INBACDAI001I000 interface with Daikin AC external protocol firmware loaded.
- Specific connection cable to connect Daikin AC unit with INBACDAI001I000 gateway.
- MiniUSB cable for console communication.
- Product documentation.

### 7.2 Physical checking

First point to look at to make sure that gateway is working properly is to check physical connections:

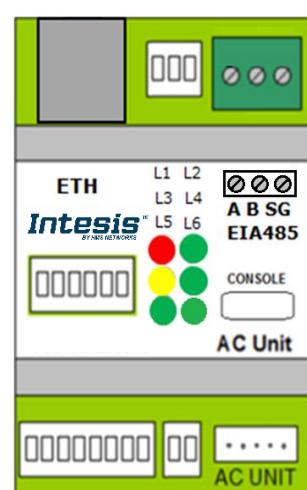

- 1.- Make sure that the supplied cable is correctly connected between the AC unit and the gateway. INBACDAI001I000 needs to be connected to the AC unit or externally powered before starting the device configuration. Contact Intesis if you need to power your device without connecting it to the AC unit.
- 2.- Check that the AC unit is connected to mains.
- 3.- If using BACnet MS/TP, check the EIA485 connection from the gateway to the BACnet MS/TP. Remember to verify polarity and terminal resistors configuration. If using BACnet IP, check the IP network connections.

### 7.3 LED status

On start up, all leds blink once and then turn off. After that, depending on the type of connection (MS/TP or IP) and the processes carried out, LED status may change.

Please, check the table below for more information:

| LED           | Status          | Description                        |
|---------------|-----------------|------------------------------------|
| L1<br>(red)   | ON Steady       | AC communication error             |
|               | Blinking        | AC error                           |
|               | Off             | No errors present                  |
| L5<br>(green) | ON Steady       | BACnet MS/TP link                  |
|               | Blinking        | Activity on the BACnet MS/TP bus   |
| L6<br>(green) | ON Steady       | Ethernet link                      |
|               | Blinking        | Activity on BACnet IP              |
| L1+L4+L5      | Blinking        | Device in Bootloader mode          |
| All           | Blinking        | Fatal Error                        |
| All           | On Steady 1 sec | On start up (for testing purposes) |

## 7.4 Occupancy

Each indoor unit has its own occupancy signal. Remember that this signals needs to be feed by an external sensor which indicates if there is presense or not (occupancy). This signal is processed directly in the INBACDAI001I000.

When occupancy mode is active, according to current room temperature it will set the mode, setpoint and on/off, for example:

- Room Temperature > OCS: Setpoint = OCS, Mode = Cool, On/Off = On
- Room Temperature < OHS: Setpoint = OHS, Mode = Heat, On/Off = On
- OCS < Room Temperature > OHS: Setpoint = OCS/OHS depending on current mode (if Fan or Dry mode is active => no setpoint is sent), On/Off = On

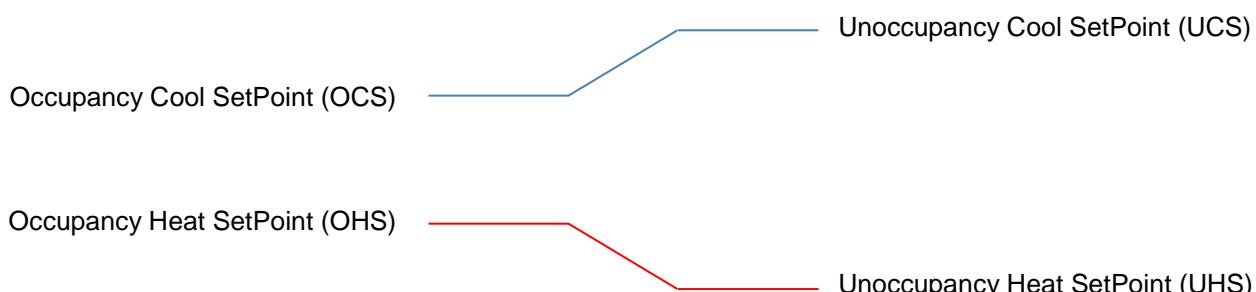

When unoccupancy mode is active, according to current room temperature it will set the mode, setpoint and on/off, for example:

- Room Temperature > UCS: Setpoint = UCS, Mode = Cool, On/Off = On
- Room Temperature < UHS: Setpoint = UHS, Mode = Heat, On/Off = On
- UCS < Room Temperature > UHS: Setpoint = UCS/UHS depending on current mode (if Fan or Dry mode is active => no setpoint is sent), On/Off = On (if Unoccupancy Deadband Action is = 1)

These checks will be done each time the indoor unit occupancy status is changed, and if **check continuously** checkbox is checked, also each time the room temperature changes.

The configuration set on the occupancy signals is applied from the very first moment the occupancy signal is enabled until the user changes the setpoint, mode or the On/Off signal, which disables occupancy functionality.

The minimum difference between Cool and Heat SetPoints must be 2°C/4°F.

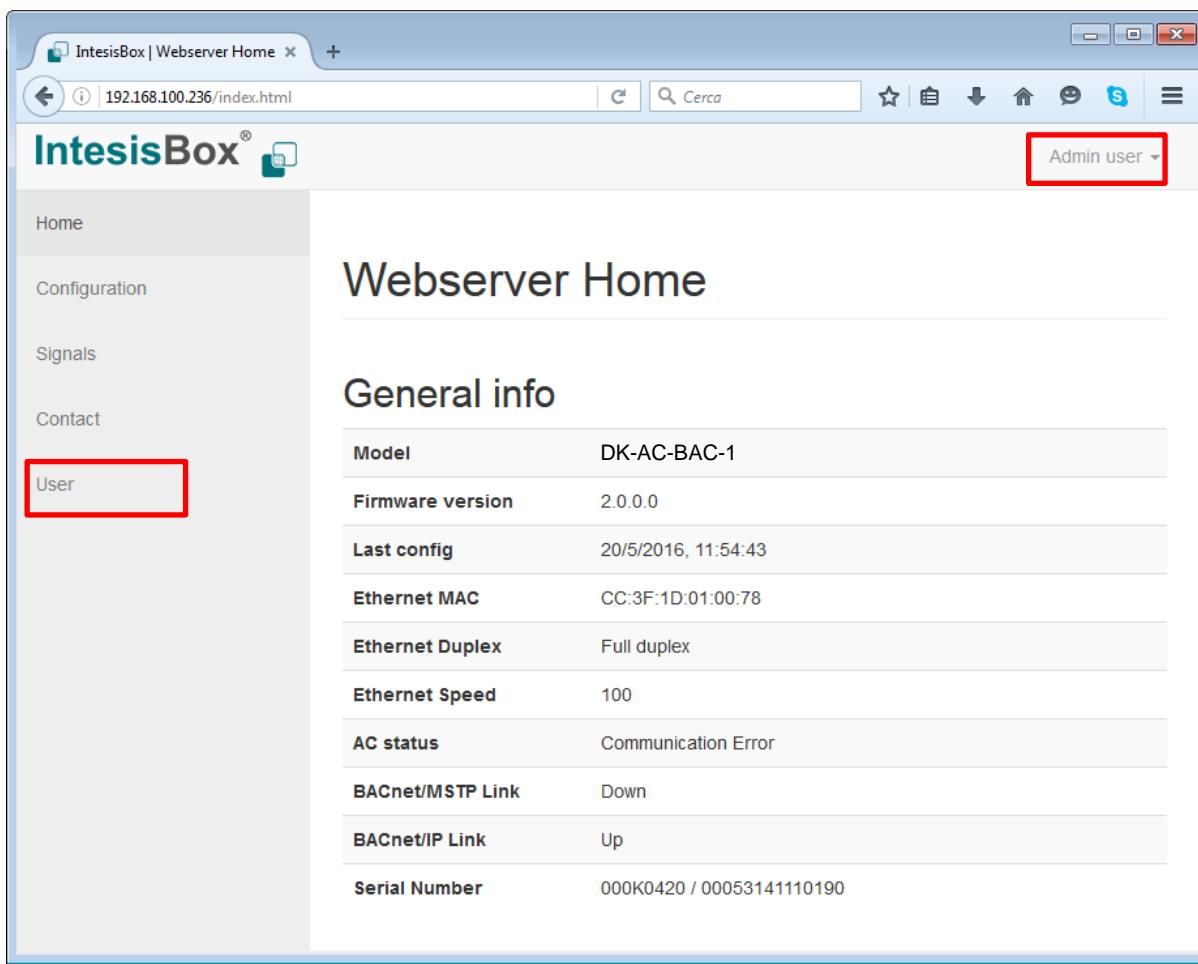

## 7.5 Configuration tool

In order to check the status of the device, signals values and general configuration, the INBACDAI001I000 includes a configuration tool. This tool is accessible only through the Ethernet port, so keep in mind that you need to switch **SW3 P1 'ON'**.

By default the device comes with a static IP, so please check that you are in the same network domain in order to connect. The default IP is: **192.168.100.246**.

### 7.5.1 Home

Once you reach the page, remember to login with your user and password. To access the login site, click on "User" or use the drop down menu on the top right corner for user selection.

There are two access levels: **admin** and **operator**. The default password value for each user is **admin** ➔ admin and **operator** ➔ operator.

Admin has total control on the device configuration and it can control the AC unit from the web app itself. On the contrary, operator can only read information from the current configuration and can operate the AC. Priority used when using the operator mode is always set to 8.

**IMPORTANT:** Once configuration is done, we recommend changing the passwords to ensure access control on the gateway.

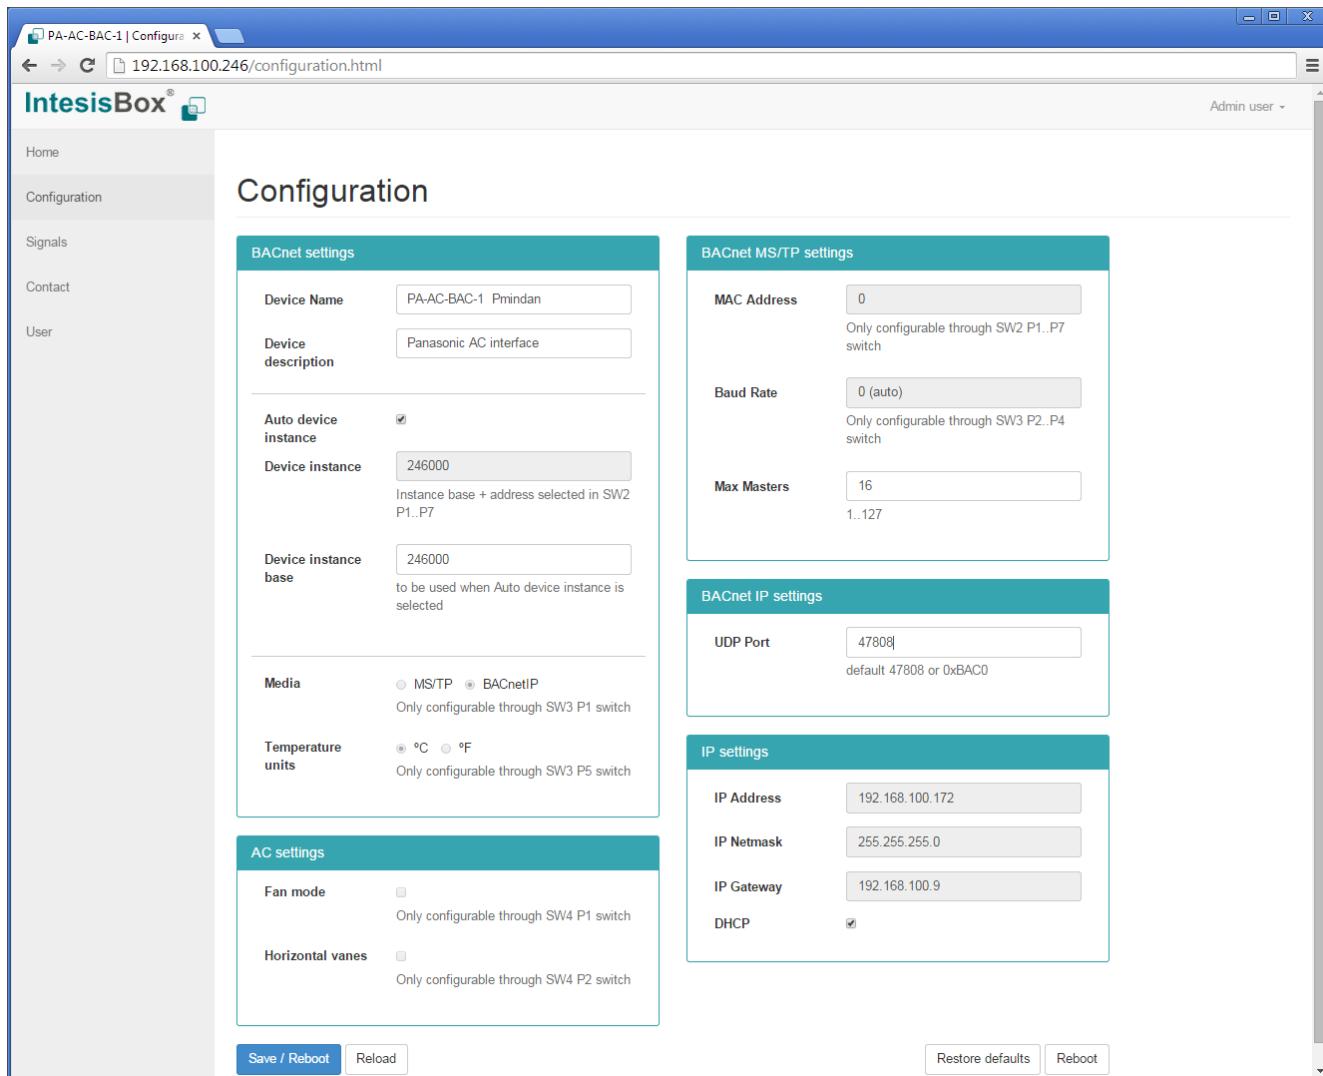

## 7.5.2 Configuration

On the configuration section, general **BACnet settings**, specific **BACnet MS/TP** and **BACnetIP settings**, **IP settings** and **AC settings** can be configured. Each type of parameter is grouped in different blocks.

The screenshot shows the IntesisBox Configuration interface. The left sidebar includes links for Home, Configuration (selected), Signals, Contact, and User. The main area is titled 'Configuration' and contains several panels:

- BACnet settings** panel:
  - Device Name: [Input field]
  - Device description: [Input field]
  - Device password: [Input field] Change BACnet password
  - Auto device instance: [Input field] 244 Instance base + address selected in SW2 P1..P7 switch
  - Device instance base: [Input field] 246000 to be used when Auto device instance is selected
  - Media: MS/TP (radio button) BACnetIP (radio button) Only configurable through SW3 P1 switch
  - Temperature units: °C (radio button) °F (radio button) Only configurable through SW3 P5 switch
- BACnet MS/TP settings** panel:
  - MAC Address: 0 Only configurable through SW2 P1..P7 switch
  - Baud Rate: 0 (auto) Only configurable through SW3 P2..P4 switch
  - Max Masters: 127 1..127
  - Max Info Frames: 1 1..255
- IP settings** panel:
  - IP Address: 192.168.100.236
  - IP Netmask: 255.255.255.0
  - IP Gateway: 192.168.100.9
  - DHCP: [checkbox]
- BACnet IP settings** panel:
  - UDP Port: 47808 default 47808 or 0xBAC0
  - Foreign Device Registration: [checkbox] checked
  - BBMD IP Address: 192.168.100.111
  - Registration TTL: 60 default 300 seconds

At the bottom are buttons for Save / Reboot, Reload, Restore defaults, and Reboot.

### 7.5.3 Signals

On this section a complete list of the available BACnet objects, their **type**, **Object Instance**, **priority** and current **value** is shown. Clicking on the “**Edit**” button, users will be able to command the system having feedback from both BACnet and AC system.

It also allows continuous monitoring of the current status of the variables. The refresh time for the AC information is shown using a progression bar in the top and the bottom of the signals list.
